Summary

Recent Computer Science graduate from Toronto Metropolitan University with a strong foundation in databases, data warehousing, SQL, Python, and distributed data processing. Through coursework and hands-on projects, I've built data pipelines, reporting layers, dimensional models, and Power BI dashboards using SQL Server, PySpark, Databricks, Delta Lake, and Power BI. I enjoy working through messy data, understanding how systems fit together, and turning raw information into reliable data products and useful business insights. I am especially interested in roles where I can keep building technically while contributing to data engineering, analytics, and business intelligence work.

EDUCATION

Bachelor of Science (BSc) in Computer Science September 2022 - October 2026
Toronto Metropolitan University, Toronto, ON

SKILLS

Data Engineering: ETL/ELT, Data Pipelines, Medallion Architecture, Lakehouse Architecture, Data Integration
Programming & Analytics: Python, SQL, T-SQL, PySpark, Pandas, Exploratory Data Analysis
Platforms & Databases: Databricks, Delta Lake, SQL Server, PostgreSQL, SQLite
BI & Modeling: Power BI, DAX, Power Query, Dimensional Modeling, Star Schema, KPI Reporting
Data Quality & Operations: Validation, Reconciliation, Schema Checks, Troubleshooting, Root-Cause Analysis
Development & Tools: REST APIs, Git, GitHub, Docker, Testing, Technical Documentation

PROJECTS

Urban Mobility Data Platform | Python, PySpark, Delta Lake, SQL, Databricks, PowerBI
- Built a lakehouse pipeline integrating multi-million-row transportation and weather data using PySpark, Databricks, SQL, and Delta Lake.
- Implemented incremental ingestion, schema validation, data-quality checks, monitoring, and failure handling across Bronze, Silver, and Gold layers.
- Used distributed processing to clean, transform, join, and aggregate large datasets for reliable downstream reporting.
- Developed dimensional data marts and Power BI dashboards for operational KPIs, trend analysis, and performance monitoring.

SQL Server Data Warehouse & Analytics Project | SQL Server, T-SQL, ETL, Data Warehousing,Power BI
- Built a Medallion-style data warehouse integrating multiple CRM and ERP source datasets across Bronze, Silver, and Gold layers.
- Developed T-SQL ETL workflows for cleansing, validation, deduplication, standardization, and business-rule transformations.
- Designed dimensional models and Power BI reporting for sales KPIs, customer segmentation, product performance, and trend analysis.

Brazilian E-Commerce Analytics | Power BI, DAX, Power Query, SQL
- Built an interactive Power BI dashboard using the Olist Brazilian e-commerce dataset to analyze sales, orders, customers, products, and delivery performance.
- Cleaned and transformed raw transactional data, created relationships and DAX measures, and developed KPIs including revenue, order volume, average order value, and customer trends.
- Designed business-focused visuals and insights to highlight sales performance, customer behaviour, product trends, and operational patterns.

WORK EXPERIENCE

Restaurant Supervisor | Lebanese Garden, Toronto, ON May 2022 – Present
- Supervise and coordinate a 4-5 person team while managing daily operational priorities in a fast-paced environment.
- Identify and resolve workflow and service issues, adjusting task assignments and priorities to maintain efficiency.
- Support high-volume catering and events serving 200+ customers while coordinating staffing, timing, and operational requirements.
